

Mobile App Development Intern

Summer 2026 · Full-time · 2 Months · On-site at QSTP

About Vora

Vora is a Qatar-built hardware + software startup that turns any existing air conditioner into an optimized, Gulf-tuned cooling system without replacing the unit. Our AI-powered device sits in the room, learns the AC's remote, and continuously manages it to reduce energy waste by ~30% while keeping comfort steady. We also detect early signs of AC issues before they turn into breakdowns and leaks. Vora is incubated by QSTP and has been recognized by Qatar's Minister of Environment and Climate Change

The Role

We're looking for a Flutter developer intern to build Vora's mobile app from the MVP stage. You'll be building core product screens that users interact with daily, from AC control and scheduling to maintenance alerts and savings dashboards.

You'd work directly with the founders and report to the team leads, with regular check-ins and guidance on product direction. But day to day, you'll be the one making the app happen.

What You'd Be Working On

- Building the core MVP app screens: device control, 7-day scheduling, maintenance alerts, savings analytics
- Implementing the multi-room and multi-home dashboard for landlords and property managers
- Connecting the app to our cloud backend via REST APIs
- Making UI/UX decisions within our brand guidelines, since you'll often be the closest person to the user experience
- Iterating based on feedback from early users and pilot deployments

What We're Looking For

- Solid working experience with Flutter and Dart. You've built at least one functional app beyond a basic tutorial project
- Comfortable working with REST APIs
- Understands state management in Flutter (Provider, Riverpod, Bloc, or similar)
- Uses Git and can work in a collaborative codebase
- Can take a feature description and turn it into a working screen without needing someone next to you the whole time
- Takes initiative and communicates when you're stuck rather than going silent

Bonus Points

- Published an app to the Play Store or App Store, even a simple one
- Experience with Firebase or similar backend services
- Good eye for UI/UX. You care about how things look and feel, not just whether they work
- Familiarity with BLE or IoT device communication
- Experience displaying real-time data (live readings, updating dashboards)

Details

- Duration: 2 months, full-time
- Dates: June 1 – July 30, 2026
- Location: On-site at our QSTP office, Qatar
- For any queries, email anas@vora.qa or mazen@vora.qa
